

EveryCloud Technologies Email Archiving Secure archiving without compromise

Our fully automatic cloud archiving, affordable prices, legal and regulatory compliance, and protection ensure security and peace of mind for you and your business.

Email Archiving – What Is It?

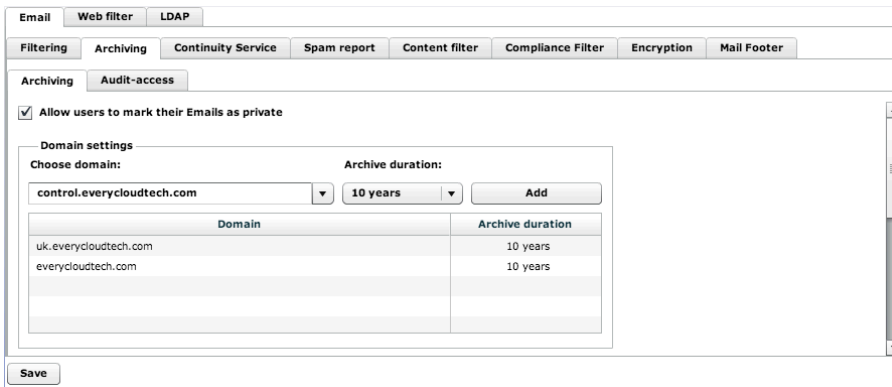

Your business sends and receives hundreds, perhaps thousands of emails daily. Keeping an accurate archive of those messages is essential, but difficult to accomplish on your own. EveryCloud Technologies offers advanced email archiving services to capture, secure and store ingoing and outgoing emails on our redundant servers.

Email archiving is actually very simple – it's the preservation and indexing of ingoing and outgoing emails from each account in your organization. Those messages are stored on our servers, and are indexed to be fully searchable. All that's required is a keyword or a string of relevant text, and you can easily search and locate specific messages, and then resend them with the click of a mouse.

Search for archived emails from the easy to use Control Panel

Why Choose EveryCloud Technologies Email Archiving?

Setting up and deploying archiving is as simple as ticking a box

company's mail server. It also requires more than storing communications in a backup folder. Most mail servers can be hacked without leaving a trace, and hardcopy files can be stolen in person, or lost through accident and mischance.

EveryCloud Technologies Email Archiving offers long-term storage, in our fully secured, redundant servers, ensuring that you remain in compliance with regulations, and are able to easily access vital communications.

Email archiving is vital, not just for relieving the load on mail servers, but also for creating a robust, accessible, long-term record of ingoing and outgoing communication. Many nations have moved to requiring mandatory tamper-proof business-related email archiving. However, enterprise solutions can be extremely expensive, putting them out of reach for small and medium businesses. EveryCloud Technologies offers industry-best security and operation, with an affordable price tag. Regulatory compliance doesn't have to cost a fortune.

Tamper-proof archiving requires more than storing messages in hardcopy form, or on your

Service & Support
